DMS METERING SOLUTIONS

CASE STUDY: Water Metering for Coking Farm Fishery

Sector: Education
Location: Sheffield, United Kingdom
Solution Provided: Apator PoWogaz JS15 Water Meter

APATOR POWOGAZ

Overview

Coking Farm Fishery required a compact and reliable water-metering solution to provide accurate monitoring of water consumption across part of its site.

For leisure and outdoor facilities, having a clear understanding of water usage can help operators manage consumption, identify changes in demand and support more efficient day-to-day site management.

DMS supplied an **Apator PoWogaz JS15 Water Meter**, providing a simple and dependable solution for measuring water consumption on a smaller-diameter supply serving the fishery's facilities.

Project Requirements

- Accurate measurement of water consumption
- A compact meter suitable for a DN15 water supply
- Reliable operation across varying levels of demand
- Clear and easy-to-read consumption data
- A robust solution suitable for long-term use
- Improved visibility of water usage across the site

DMS Solution

Water Metering
Apator PoWogaz JS15

DMS supplied an **Apator PoWogaz JS15 Water Meter** for installation on a smaller water supply within the fishery.

The JS range provides accurate measurement of water consumption in compact installations, making it particularly well suited to smaller branch supplies and individual areas of a site.

For a fishery environment, water can be required for a variety of operational and visitor facilities. Installing a dedicated meter allows consumption on a particular supply to be monitored independently, providing a clearer picture of how much water is being used.

This type of sub-metering can also

help site operators identify unexpected increases in consumption, monitor usage patterns over time and support future water-efficiency initiatives.

The Apator PoWogaz JS range combines compact dimensions with proven metering technology, providing a practical solution where reliable measurement is required without the need for a larger industrial meter.

Results

The installation provided the fishery with:

- Accurate measurement of water consumption
- Greater visibility of water use within the monitored area
- A compact solution suited to a smaller water supply
- Improved ability to track changes in consumption
- Data to support efficient site management
- A reliable water meter designed for long-term operation

By introducing dedicated water metering, the fishery can gain a clearer understanding of consumption and use accurate meter readings to support ongoing management of its water services.

Why DMS?

With over 25 years of experience in water and utility metering, DMS supplies reliable solutions for leisure facilities, commercial premises, estates and specialist applications throughout the UK.

Working with leading manufacturers including **Apator PoWogaz**, DMS can provide water meters ranging from compact domestic and sub-metering products through to larger commercial and industrial solutions.

Whatever the application, DMS can help identify the correct meter size, specification and communication requirements for the project.
